2.1.2. Oscilatii ale gravitatii produse de cutremurele majore

În urma producerii unui cutremur major, în interiorul Globului sunt generate unde elastice care se propagă în toate direcțiile, reflectându-se şi refractându-se pe fiecare din limitele care separă regiuni cu impedanță acustică diferită. Redistribuirile de mase legate de aceste oscilații se reflectă şi în variații câmpului gravității

Cea mai importantă discordanță de impedanță este chiar suprafața Pământului. Odată ajunse aici, undele seismice/gravitaționale se refletă intens, revenind în interiorul Globului. Fenomenul de reverberație apare astfel în mod repetat, fiind sesizabil pe suprafete mari şi având durate de timp mult mai mari decât seismul care le-a generat.

Tabelul 1 o listă de cutremure mai semnificative, iar tabelele care urmează arată înregistrările efectuate în cadrul laboratorului nostru de gravitate.

Tabel 1 Cutremure majore înregistrate în perioada 1 ianuarie-1 iunie 2012
